

HOW TO STUDY FOR A TEST

☒ START STUDYING **3 DAYS BEFORE** THE TEST... DON'T WAIT UNTIL THE NIGHT BEFORE.

☒ Make sure your tool kit is complete

☒ Re-read all your tool kits and make sure that you understand them

☒ Look at old tests and quizzes (especially team tests when studying for the individual test)

☒ Read through the chapter. Look for written out explanations of concepts or procedures.

☒ Read the objectives of the first page of the chapter.

If you find a topic that you are not confident about you could:

★ Find old homework problems of that type that were done correctly

★ Go to www.hotmath.com and practice problems you still find difficult

★ Call a friend and see if they can explain it to you

★ Ask your parents or siblings for help

★ Write down your questions and ask me for help during break, or SSRW

★ Write down your questions and ask me right before the test
